

What is claimed is:

1. A device for facilitating potty training comprising at least one tissue, said at least one tissue:

being biodegradable;

being semi-porous;

being substantially flat so as to be placed proximate water contained within a toilet; and

being substantially buoyant, while at the same time being sufficiently rigid so as to be able to remain substantially buoyant after receiving at least one of urine and fecal matter of a child.

2. The device of Claim 1 wherein said at least one tissue being between approximately 8 pound tissue and approximately 10 pound tissue.

3. The device of Claim 2 wherein said at least one tissue being approximately 10 pound tissue.

4. The device of Claim 1 wherein said at least one tissue having at least one of a design and configuration adapted to encourage a child to deposit at least one of urine and fecal matter on said tissue while said tissue being placed proximate said water contained within said toilet.

5. A method for facilitating potty training comprising the steps of:

providing at least one tissue, said at least one tissue:

being biodegradable;

being semi-porous;

being substantially flat so as to be placed proximate water contained within a toilet;

being substantially buoyant, while at the same time being sufficiently rigid so as to be able to remain substantially buoyant after receiving at least one of urine and fecal matter of a child; and

having at least one of a design and configuration adapted to encourage a child to deposit at least one of urine and fecal matter on said tissue while said tissue being placed proximate said water contained within said toilet;

placing said at least one tissue proximate said water contained within said toilet; and

flushing said at least one tissue down said toilet after said child has deposited at least one of urine and fecal matter on said at least one tissue.

6. The method of Claim 5 wherein said at least one tissue being approximately 10 pound tissue.
